109	11630 Lakeshore Drive	Clermont
112	16240 County Road 474	Four Corners

LAKE COUNTY Staffed Fire Stations

MORE FROM LEESBURG REGIONAL MEDICAL CENTER

Dispose of Your Sharps Properly.

Sharps are just one category of biohazardous waste, which is regulated, infective, infectious and medical waste. Sharps includes needles, scalpel blades, glass and pipettes that are used or contaminated with body fluids.

Biohazardous waste must be disposed of according to federal, state and local regulations. Used needles and other contaminated sharps must be placed in a puncture-resistant, leak-proof container that is closable and is red in color or marked with a biohazard label.

Leesburg Regional Medical Center is proud to work with Lake County to promote the safe Sharps Disposal Program.

SHARPS DISPOSAL PROGRAM

DISPOSE
OF YOUR
SHARPS
SAFELY!

THE VOYAGER

SHARPS DEFINED

Sharps are objects having the potential to puncture or lacerate. Sharps include syringes with attached needles and disposable lancets.

Improper disposal of Sharps can cause problems ranging from placing other residents and waste management workers at health risk, to clogging lift stations when disposed in the sewer system.

Sharps can transmit Hepatitis, AIDS and other fluid-borne pathogens. As the health care industry moves toward increasing the number of procedures patients can do at home, such as self-administered insulin, the safe disposal of used Sharps is a major public health concern.

SHARPS DISPOSAL

By using the container, offered at no charge from the Lake County Department of Public Safety, residents can throw sharps in their household trash.

OTHERWISE, **NEVER** DISPOSE OF NEEDLES IN HOUSEHOLD RECYCLING OR GARBAGE BINS!

The Voyager container has the endorsement of the Florida Department of Environmental Protection and is offered FREE to Lake County residents.

HOW TO USE

Place the syringe into the container and twist. The Voyager safely disposes and contains the used needle and a small portion of the syringe while simultaneously destroying and disabling the syringe barrel, preventing any possible reuse or accidental needlestick injuries associated with whole syringe disposal.

A single Voyager container holds more than 120 individual 1cc insulin syringes (140 1/2cc syringes, or 155 1/3cc syringes), accepts most lancets, and functions with all brands of insulin syringes.

Once the container is full, it can then be placed into a garbage bin. Do not dispose of it in the recycling bin.

Lake County residents are encouraged to participate in this program if they cannot afford to purchase Sharps disposal containers from area pharmacies.

REMEMBER

It is individual responsibility that keeps others safe.
Always dispose of your sharps properly!

Step 1

Step 2

Step 3

Step 4

The containers are being made available free to residents at all staffed Lake County fire stations.
